

## Readings for project ideas

### Asthma prevalence Data

sources :

(“Asthma | National Health Interview Survey (NHIS) Data | CDC,” 2024)

CDC. (2024, August 29). Behavioral Risk Factor Surveillance System Prevalence Data.

BRFSS Asthma Call-back Survey (2006-2023)

I decided to look into articles on the latest data regarding asthma prevalence in children and adults. One of the most popular chronic illnesses in America affecting about 42 million Americans in their lifetime. ([BRFSS 2023 surveillance report](#)) Earliest data can be traced back to 1980 and the latest 2024. Data includes numbers and percentage of asthma prevalence among adults and children along with mortality rates, Asthma attacks SE, emergency department visits, hospital inpatient stays. They scale from national level to state level. NHIS data may be limited due to national data having smaller subpopulations and not as much nuanced data with larger variance. BRFSS is state administered and is more frequently updated with larger sample populations.
